

## “How things Move”

### VERSE 1

If I wanna take this ball  
And put it into the goal  
I've got to use the exact right force  
Like from a kick or a throw

Force can put it into motion  
So I can complete my mission  
Of putting that ball  
into the perfect position

### CHORUS

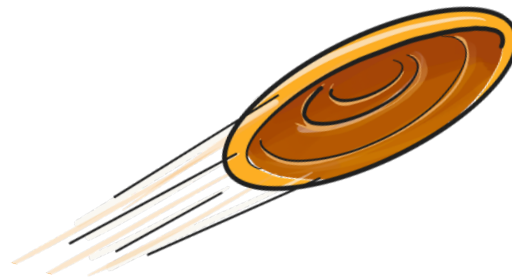

FORCE is a push or a pull  
When an object moves, that's MOTION  
and POSITION is where that thing is  
at any given moment

So If you wonder why an object  
is moving east, west, south or north  
It's cuz motion and position  
They are both changed by force!

### VERSE 2

If I wanna throw this frisbee  
Right into my friend's hand  
I've got to use the exact right force  
I push and pull my wrist to control where it lands

That force puts it into motion  
So I can complete my mission  
Of putting my flying frisbee  
into the perfect position

### CHORUS

FORCE is a push or a pull  
When an object moves, that's MOTION  
and POSITION is where that thing is  
at any given moment

So If you wonder why an object  
is moving east, west, south or north  
It's cuz motion and position  
They are both changed by force!
